AIIMS KALYANI · OUT-PATIENT DEPARTMENT

OPD Queue System: how it works

From the booklet scan at the counter to the end of the consultation: what each person does, and what they are trying to achieve.

Describes the system as of 1 November 2026

THE VISIT IN ONE LINE

Scan the booklet → Choose the doctor → Print the slip → Wait and watch the board → Doctor calls → TV announces → Go to the room → Doctor scans in → Doctor scans out

WHO USES IT, AND WHAT THEY WANT

Patient

Be seen by the right doctor without standing in a line, and never miss their turn.

Uses: the printed slip, the waiting-hall TV, and (optionally) their own phone.

Registration staff

Get each patient into the right doctor's line in a few seconds, without retyping details.

Uses: the Registration screen, a barcode scanner or camera, and a slip printer.

Doctor

See one patient after another, with no gaps and no calling out names.

Uses: the Doctor Desk (one room, works on a phone) or the Doctor Room screen (all rooms).

Waiting-hall TV

Tell everyone clearly whose turn it is and which room to go to.

Uses: a TV or monitor with speakers, showing the TV Monitor screen.

Admin

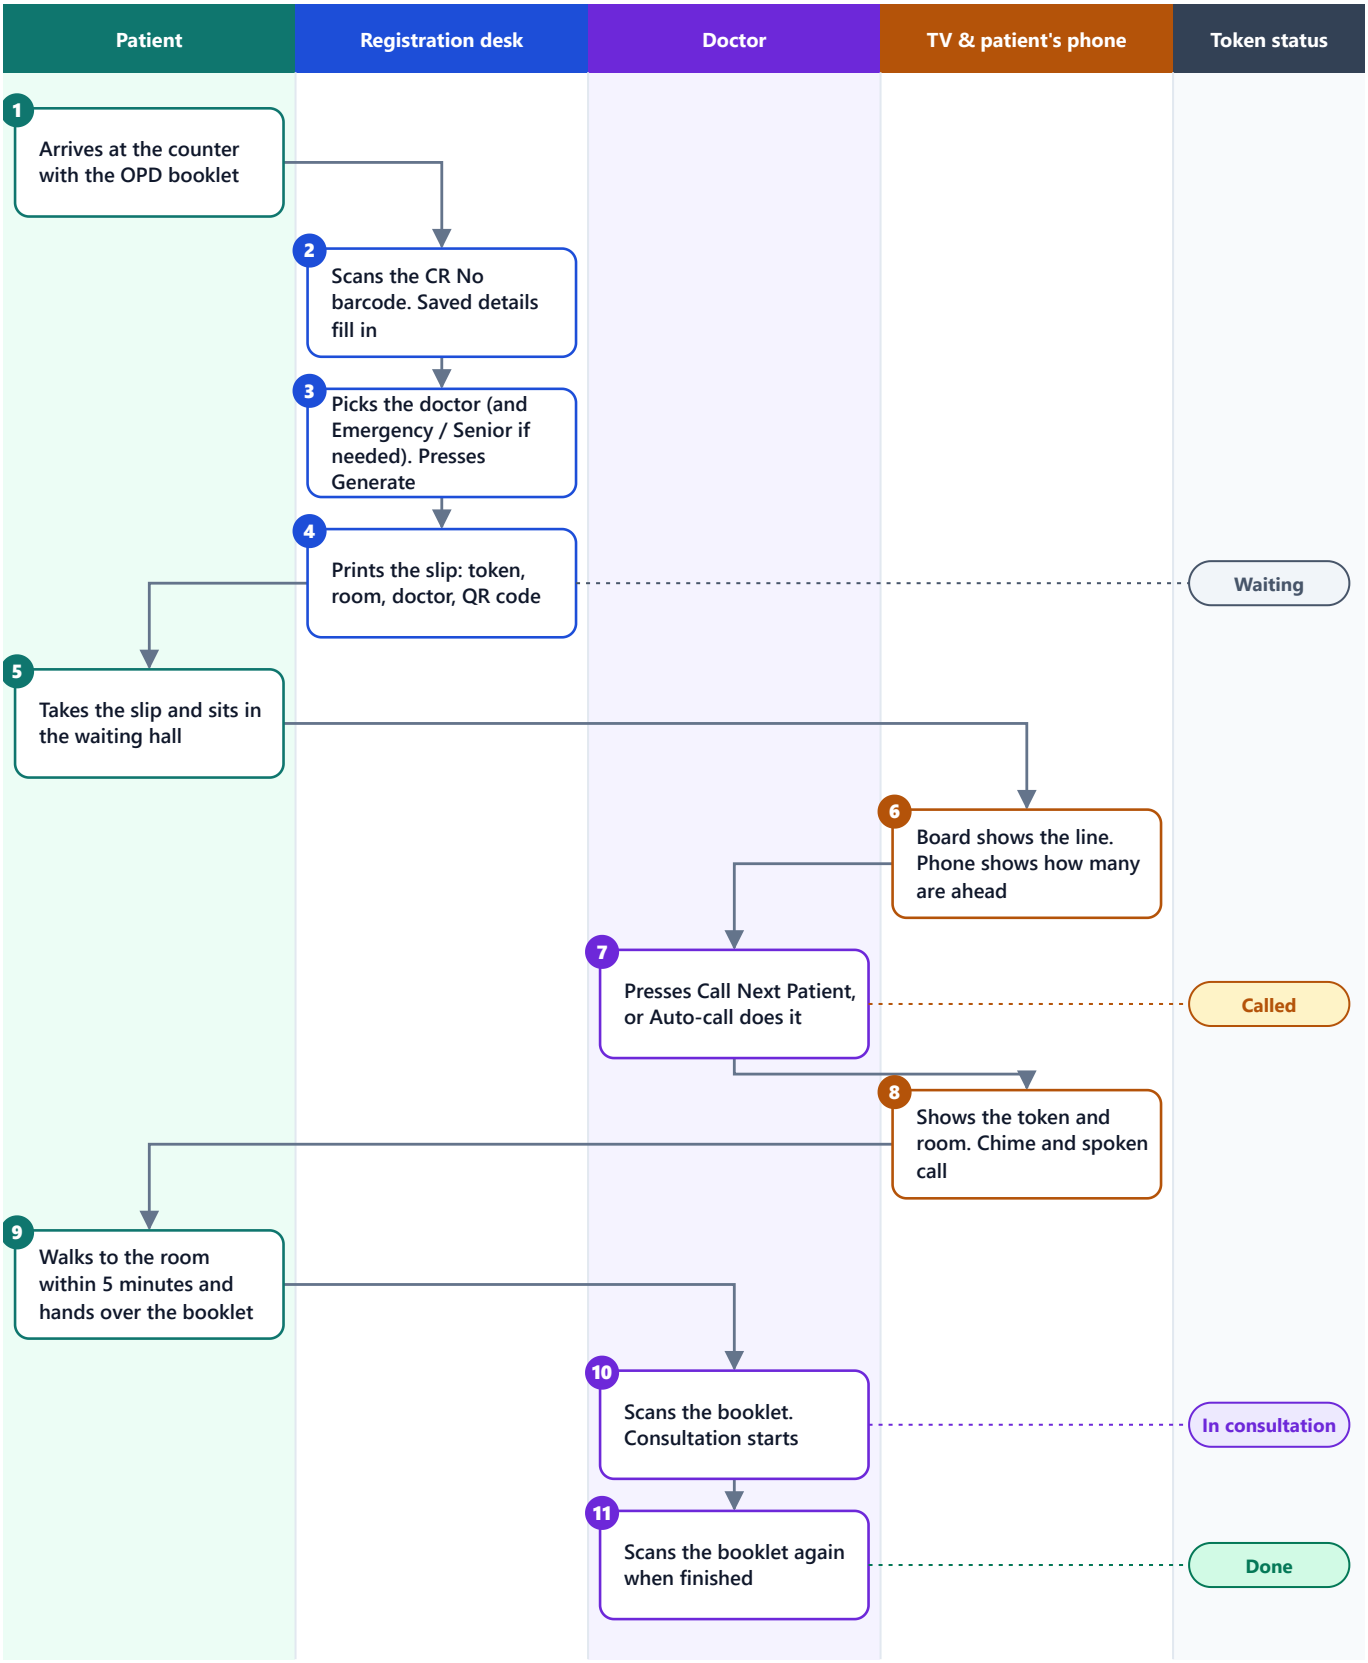

Keep doctors, rooms and departments correct, and see how each day went.

Uses: the Admin, Settings and Analytics screens (separate admin password).

1 One patient, start to finish
2 The patient
3 Registration staff
4 Doctor
5 Waiting-hall TV and Admin
6 Token statuses and ground rules

1 One patient, start to finish

Each column is one person or screen. Follow the numbers from top to bottom. The right-hand column shows the token's status at that moment, which is what every screen displays.

Late or absent patients, and how the next patient is chosen, are explained in sections 2 and 4.

2 The patient

GOAL

Get to the right doctor with as little waiting and confusion as possible, and know exactly when to walk in.

1. **Come to the registration counter with the OPD booklet.**
   Staff scan the barcode next to **CR No** on the booklet's sticker.
2. **First visit only: give your name and mobile number.**
   They are saved with your CR No. On every later visit, scanning the booklet fills them in, so nothing is asked twice.
3. **Staff choose your doctor.**
   Emergency patients and senior citizens are marked, so they are called before others.
4. **Take your slip.**
   It shows your **token number**, **room** and **doctor** in large print, plus the date, your name, CR No, mobile number, the time it was issued, and a QR code.
5. **Wait in the waiting hall.**
   The TV shows who is with each doctor. To follow your place on your phone, scan the QR code on the slip: it shows how many people are ahead of you and an estimated wait, and can alert you (sound, notification, vibration) when only 2 people are left before you. Available in English, Hindi and Bengali.
6. **When it's your turn, the TV calls you.**
   It shows your token and room, plays a chime and says it aloud, in English and then Hindi (Bengali can be chosen): "*Token number 12, please proceed to Room 5.*" · "टोकन नंबर 12, कृपया कमरा नंबर 5 में जाएं।" Your phone shows "It's your turn".
7. **Go to the room within 5 minutes and hand the booklet to the doctor.**
   The doctor scans it. Your consultation has started.
8. **When the consultation ends, the doctor scans the booklet again.**
   Your visit for this OPD is complete.

If you don't come in after being called

If you are not in the room within **5 minutes** of being called, you go back in the line, a little further each time:

1ST TIME	2ND TIME	3RD TIME
Back 3 places	**Back 5 places**	**Marked absent**

The 5 minutes only count while the doctor is free. If the doctor is still with another patient, you are not moved back for waiting at the door. If a patient marked absent comes back, staff can put them back in the line.

3 Registration staff

GOAL

Put every patient in the right doctor's line in a few seconds, with correct details and no retyping.

At the start of the day: open the Registration screen, log in with the staff password (once per computer), and choose the department.

For each patient

1. **Scan the booklet.**
   Use the handheld scanner, or press **Camera** on a phone or a computer with a webcam. Typing the CR No also works.
2. **Check the details.**
   For a returning patient, the name, mobile number and last doctor fill in by themselves. For a new patient, type the name and mobile number.
3. **Choose the doctor.**
   Pick the doctor from the list, or **Any doctor** to put the patient in the general line. The room is found automatically.
4. **Set the priority, only if needed.**
   Emergency or **Senior citizen**. Everyone else stays Normal.
5. **Press Generate.**
   After a scan, one more press of Enter does it. The token number is given automatically.
6. **Print the slip and hand it over with the booklet.**

How the room is chosen

The system uses the room the doctor selected on their Doctor Desk today. If they haven't selected one, it uses the room where they last saw a patient. Staff never need to know which room a doctor is in.

Good to know

- **A CR No is digits only** (15 digits on the current booklet). If a scan contains a letter, it was misread: the screen says so; scan again or type the number. The camera only accepts a number after reading it the same way twice.
- The **QR code on a slip** is not a CR No. If it is scanned by mistake, the screen says so.
- **Lost slip?** Use *Find / Reprint Slip* to search for the patient and print it again.
- Token numbers start again at **1 every day** in each department.
- The camera works only on the secure (https) web address. On a plain hospital-network address, use the handheld scanner.

4 Doctor

GOAL

See one patient after another without gaps, without calling out names, and with an accurate record of who was seen.

Doctor Desk `/doctor-desk`

One doctor, one room. Big buttons; works on a phone. Best for most doctors.

Doctor Room `/doctor`

All rooms of a department on one screen, for a nurse or coordinator: move patients between rooms, Pass (+3), Recall, put a patient back in line.

First time on the Doctor Desk: choose your name and your room. You only do this once on that computer or phone.

During OPD

1. **Press Call Next Patient.**
   The TV calls the next patient for your room. If someone is still in your room, it asks before calling.
2. **The patient comes in: scan their booklet, or tap "Came in".**
   The status becomes In consultation.
3. **When you finish: scan the booklet again, or tap "Done".**
   The status becomes Done. A scan doesn't ask for confirmation, because scanning is deliberate; the Done button does.
4. **Repeat, or switch on Auto-call.**
   With **Auto-call ON**, the next patient is called for you whenever your room is empty.

Need a break?

Press **Pause**: no new patients are called to your room until you press **Resume**. Auto-call and Pause are remembered on that device.

Patient didn't come?

Each called patient shows a countdown. After 5 minutes they move back in the line by themselves, so the next press calls someone else. Or tap **Absent**.

Who is called next

Patients sent to you or your room at registration, together with the general line ("Any doctor"):

- **Emergency** first, then **Senior citizen**, then **everyone else**;
- within each group, in order of arrival.

The countdown only runs while you are free. While you are with another patient, a called patient shows "Waiting at the door" and is not moved back.

5 Waiting-hall TV and Admin

WAITING-HALL TV · GOAL

Make every call impossible to miss: who, and which room.

- Shows each room's current patient and the people waiting next. **Names are shortened** (for example "Ravi K."); CR No and mobile numbers never appear.
- On every call: a chime and a spoken announcement in English and Hindi, or in English, Hindi or Bengali alone.
- **Recall** on the Doctor Room screen repeats an announcement.
- Press **F** for full screen. For a screen outside one room's door, click ⤢ on that room's card, or add `&room=101` to the TV link.
- Setup: open `/tv` in the TV's browser and choose the department. No login is needed.

ADMIN · GOAL

Keep the setup correct, so that doctors, rooms and departments match the day's reality, and see how the OPD performed.

Admin `/admin`

Today's overview. Add, rename or remove doctors, and see which doctors are in each room. Clean up old or test tokens.

Settings `/settings`

Staff password, departments and rooms, the TV voice, offline storage and syncing, app updates.

Analytics `/analytics`

Tokens issued, completed, waiting and absent; the Emergency / Senior / Normal mix; waiting and consultation times; patients seen per doctor; patients arriving each hour.

6 Token statuses and ground rules

STATUS	WHAT IT MEANS	HOW IT GETS THERE
Waiting	In the line	Slip printed, or moved back
Called	Called to a room, on the way	Doctor pressed Call Next, or Auto-call
In consultation	With the doctor	Booklet scanned, or "Came in" tapped
Done	Consultation finished	Booklet scanned again, or "Done" tapped
Moved back	Called, but didn't come in time	Late after 5 minutes (automatic), or Pass on the Doctor Room screen
Absent	Didn't come after being called	Late a third time, or "Absent" tapped
Cancelled	Taken out of the line	Staff cancelled or deleted the token

Rules that keep it fair and safe

- **Fair order.** Emergency, then senior citizen, then everyone else by arrival time. Patients can see the order on the board.
- **Privacy.** The TV and patients' phones show shortened names only. Full names, CR No and mobile numbers appear only on staff screens, after login.
- **No accidental removals.** Done, Absent, Cancel and Delete buttons always ask "Are you sure?" first.
- **Internet problems.** If the connection drops, the registration and doctor screens keep working on that computer and send their changes when it returns.

Screens at a glance

SCREEN	WHO	ADDRESS	LOGIN
Home	Staff: choose department and screen	`/`	Staff password
Registration	Reception	`/registration`	Staff password
Doctor Desk	Doctors	`/doctor-desk`	Staff password
Doctor Room	Nurse / coordinator	`/doctor`	Staff password
TV Monitor	Waiting hall	`/tv`	None
Patient tracker	Patients (QR on slip)	`/patient`	None
Admin · Settings · Analytics	Admin	`/admin` · `/settings` · `/analytics`	Admin password
Guide	New staff	`/guide`	Staff password

Addresses are added to the hospital's OPD web address, for example `…/registration`.
